OUR AIM

Our objective is to cater to these patients in the best way possible through the technology available at hand. The vision is to create a multifaceted application with the following core features :

- > Brain games
- > Location Tracker
- > Checklist

INTRODUCTION

We found that the best way to implement our idea was through a mobile application since in today's day and age smartphones are one thing bridging the gap between generations hence enabling efficient communication between caretakers and patients of all ages.

GOOD DESIGN MATTERS

The first step towards converting our idea into reality was figuring out a functional design for our application, since we wanted to cater to both the patients and caretakers, our target age bracket was quite large, and hence we thought the most suitable implementation would be a simple yet comprehensive login page followed by separate tabs for both parties to help bifurcate features and increase ease of accessibility.

THE REGISTRATION/LOGIN PAGE

The first page of any application is the login page, for fresh users this is switched to a registration page which asks for only the bare essential details of both the patient and caretaker to enable smooth functioning and avoid clutter data. Details include name, address and mobile numbers.

UPON LOGGING IN, THE USER
IS PROVIDED WITH AN OPTION
TO MAKE A CHOICE AMONG
TWO TABS OR FRAGMENTS
DEPENDING UPON THEIR ROLE
IN THE ECO-SYSTEM

THE CARETAKER FRAGMENT

1. A function to track and update a checklist of things which is provided to the patient to complete.
2. Access the location of the patient.
3. View a monthly progress report of the patient.

THE PATIENT FRAGMENT

1. A function to view and mark the checklist provided by respective caretaker.
2. Play a variety of games focused on developing cognitive abilities.

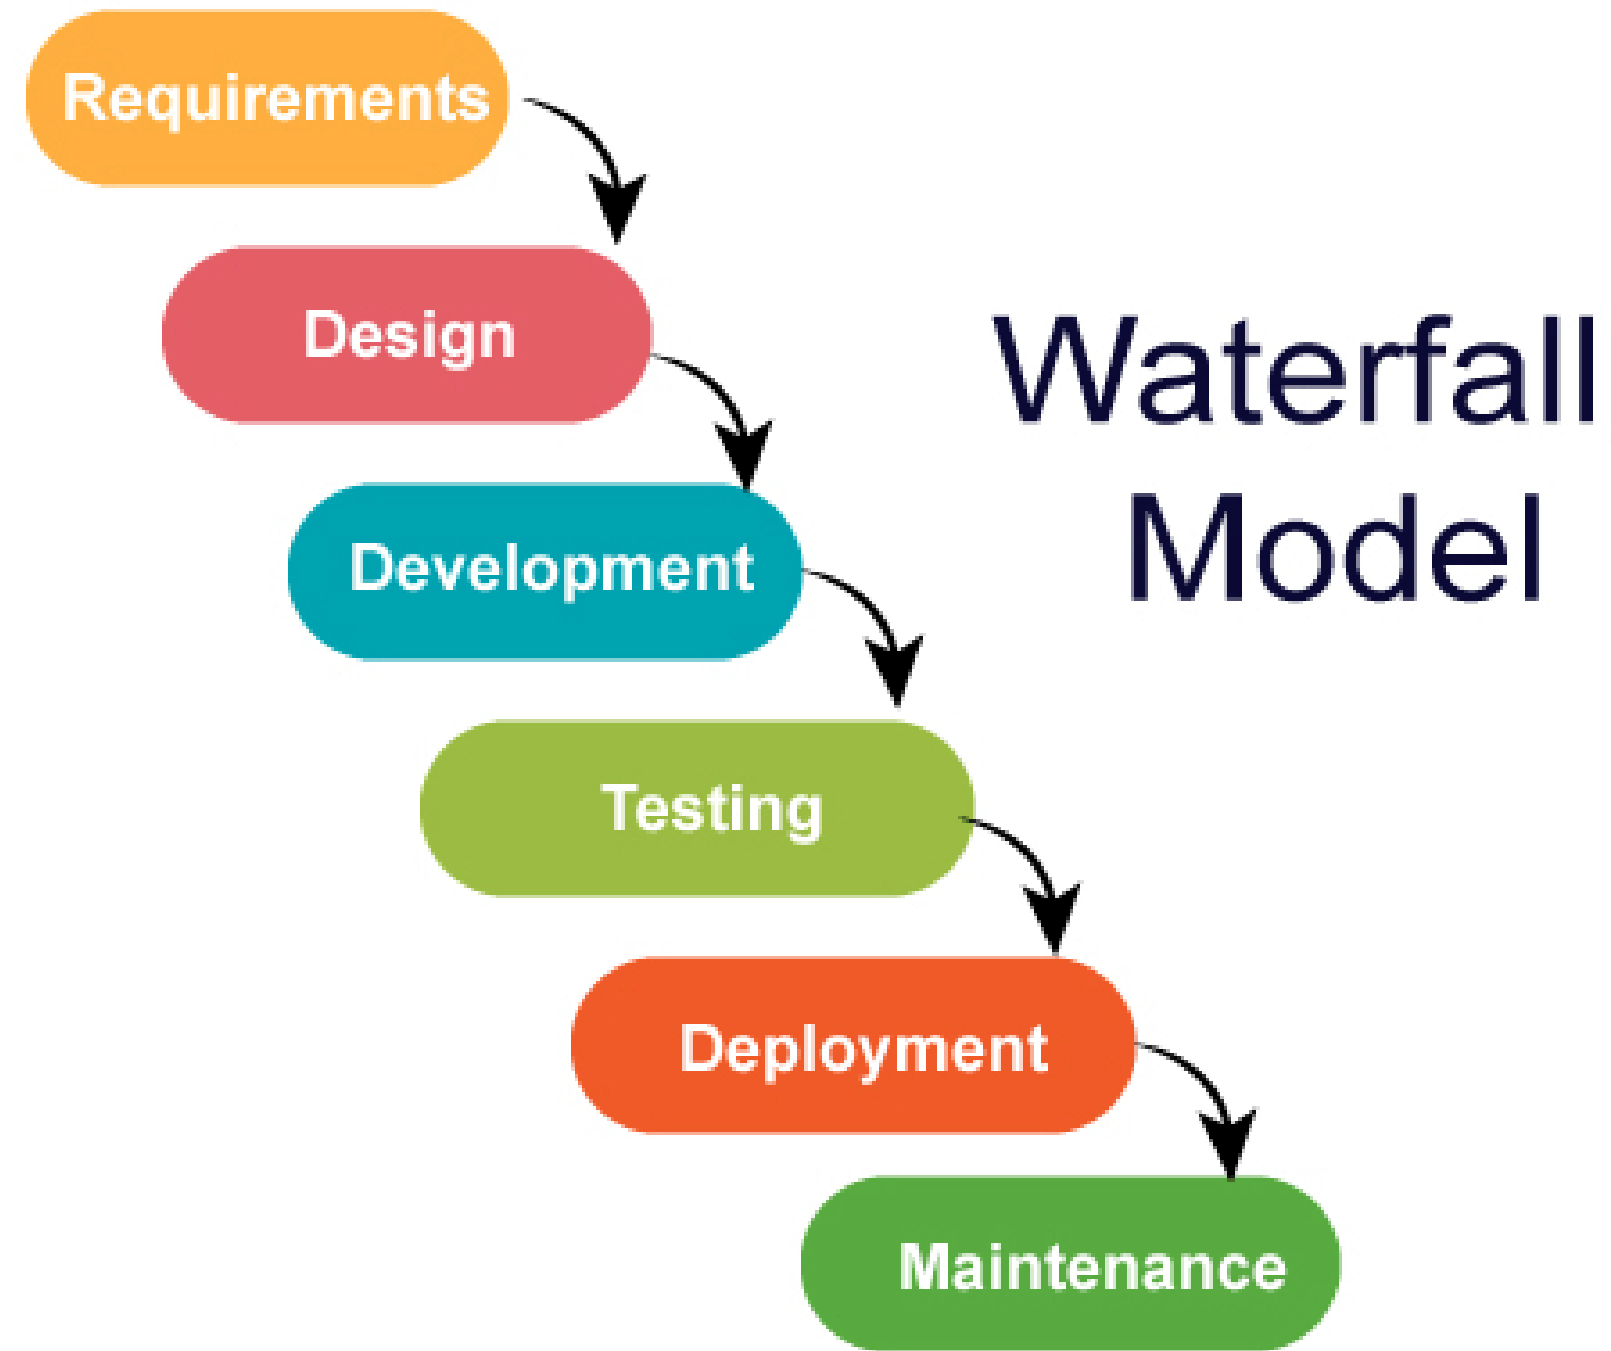

SCOPE OF PROJECT

Since it is currently not possible to cure Alzheimer's, our objective is not to solve the problem as a whole but to break it down into simpler sub-problems that can be dealt with through optimal use of the bare essential tools available at hand - on a daily basis.

The world is on a journey to defeat Alzheimer's for decades now and while it is true that a bunch of college students cannot cure one of the most common diseases on earth on their own, we can certainly play our part by making small improvements along the way.

INTRODUCTION

OH I FORGOT WE ALREADY
COVERED THAT !

*I WISH I HAD INSTALLED
ALZHELP ;P*

THANK YOU
